DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The changes made in relation to claims 1, 2, 5, 11, 12, 13, 14-15, 28 and 30 have been reviewed and accepted; therefore, rejection under 35 USC § 112, second paragraph, has been withdrawn.

The changes made in relation to claims 28-29 and 33 have been reviewed and accepted; therefore, rejection under 35 USC § 112, first paragraph, has been withdrawn.

Drawings

2. The drawings received on 02/20/02 are accepted.

Allowable Subject Matter

3. Claims 1-14, 16-20, 28-38 are allowed.

4. The following is an examiner's statement of reasons for allowance:

Regarding claim 1, the prior art of record teaches of a method for processing a communication interruption between at least two communication devices comprising the steps of: consulting data, the data comprising a plurality of predetermined prediction points indicating a fixed structure capable of presenting an interference to a communication in progress, wherein a prediction point is separated from an interruption point by a first predetermined time or distance interval, and a second predetermined time or distance interval between the interruption point and a connectivity point defines a no-coverage zone, the communication being capable of being reestablished at or beyond the connectivity point outside the no-coverage zone, based on the consulting,

predicting, during an established communication between the communication devices, that a connection to one of the communication devices will be interrupted at an interruption point and determining a no-coverage zone corresponding to the interruption point; and announcing, before the connection is interrupted, that the connection to the one communication device entering the no-coverage zone will be interrupted.

The prior art of record fails to teach where **upon emerging from the no-coverage zone and unsuccessful reconnection attempts between communication devices, determining by the one communication device that entered the no-coverage zone a next communication operation between the communication devices based on pre-programmed, user instructions.**

Regarding claim 28, the prior art of record teaches of an electronic device in a mobile communication device comprising logic to: predict, based on data stored within said electronic device, said data comprising a plurality of predetermined prediction points indicating a fixed structure capable of presenting an interference to a communication in progress, a communication drop-off for mobile communication devices in communication, wherein a prediction point is separated from an interruption point by a first predetermined time or distance interval, and a second predetermined time or distance interval between the interruption point and a connectivity point defines a no- coverage zone, the communication being capable of being re-established at or beyond the connectivity point outside the no-coverage zone, calculate a communication drop-off point based on a location of the electronic device with respect to a prediction point and an interruption point; before the drop-off point is reached, notify a user of at

least one of the communication devices of the communication drop-off that the electronic device is entering a no-coverage zone based on the calculation.

The prior art of record fails to teach where **upon emerging from the no-coverage zone and unsuccessful reconnection attempts between mobile communication devices, determine a next communication operation between the mobile communication devices based on pre-programmed user instructions.**

Claims 2-14, 16-20, 33-38 and 29-32 depend on claims 1 and 28, respectively; therefore, they are rejected for the same reasons as set forth above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
